Pimpri Chinchwad Education Trust's

PIMPRI CHINCHWAD COLLEGE OF ENGINEERING

SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044

(An Autonomous Institute Approved by AICTE and Affiliated to SPPU, Pune)

Curriculum Structure and Syllabus

of

Second Year B. Tech. Information Technology

(Regulations 2023)

Effective from Academic Year 2024-25

Institute Vision

To be one of the top 100 Engineering Institutes of India in coming five years by offering exemplarily Ethical, Sustainable and Value Added Quality Education through a matching ecosystem for building successful careers.

Institute Mission

1. Serving the needs of the society at large through establishment of a state-of-art Engineering Institute.
2. Imparting right Attitude, Skills, Knowledge for self-sustenance through Quality Education.
3. Creating globally competent and Sensible engineers, researchers and entrepreneurs with an ability to think and act independently in demanding situations.

EOMS Policy

"We at PCCOE are committed to offer exemplarily Ethical, Sustainable and Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders.

We shall strive for technical development of students by creating globally competent and sensible engineers, researchers and entrepreneurs through Quality Education.

We are committed for Institute's social responsibilities and managing Intellectual property.

We shall achieve this by establishing and strengthening state-of-the-art Engineering Institute through continual improvement in effective implementation of Educational Organizations Management Systems (EOMS)."

Course Approval Summary

Board of Studies - Department of Information Technology

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS Chairman
1.	Data Structures	BIT23PC01	2-3	
2.	Data Structures Laboratory	BIT23PC02	4-8	
3.	Computer Organization and Architecture	BIT23PC03	9-10	
4.	Object-Oriented Programming Laboratory	BIT23PC04	11-13	
5.	Data Science Laboratory	BIT23VS01	14-15	
6.	Computer Networks Technology	BIT24PC01	55-56	
7.	Computer Networks Technology Laboratory	BIT24PC02	57-58	
8.	Database Management System	BIT24PC03	59-60	
9.	Database Management System Laboratory	BIT24PC04	61-62	
10.	Community Engagement Project	BIT24EL01	63-64	

Board of Studies–Civil Engineering

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS chairman
1.	E-Waste Management	BCI23OE01	35-36	
2.	Total Quality Management	BCI23OE02	48-49	
3.	Building Services and Maintenance	BCI23OE03	50-51	

Board of Studies–Electronics and Telecommunication Engineering

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS chairman
1.	Electrical Machines	BET23OE01	22-23	
2.	Introduction to Signals and Systems	BET23OE02	24-25	
3.	Biology for Engineers	BET23OE03	38-39	

Board of Studies–Mechanical Engineering

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS chairman
1.	Material Science	**BME23OE01**	30	
2.	Drawing for Engineers	**BME23OE02**	31-32	
3.	Fundamentals of Mechanical Components and Systems	**BME23OE03**	33-34	
4.	Industry 4.0	**BME23OE04**	44-45	
5.	Energy Storage Management	**BME23OE05**	46-47	

Board of Studies–Applied Science and Humanities

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS chairman
1.	Business Studies for Engineers	**BSH23EM01**	16-17	
2.	Universal Human Values	**BSH23VE01**	18-20	
3.	Professional Development Training	**BSH24AE05**	65	
4.	Constitution of India	**BSH24VE02**	74-75	
5.	Designing Thinking & Innovation Management	**BSH24EM02**	66-67	
6.	Project Management	**BSH24EM03**	68-69	
7.	Fostering Entrepreneurship and Startups	**BSH24EM04**	70-71	
8.	Business Finance for Engineers	**BSH24EM05**	72-73	
9.	Applied Mathematics (Suggested for Mechanical branch)	**BSH24OE01**	77-78	
10.	Computational Techniques (Suggested for E&TC branch)	**BSH24OE02**	79-80	
11.	Applied Mathematics (Suggested for Civil branch)	**BSH24OE03**	81-82	
12.	Computational Techniques (Suggested for Computer and IT branches)	**BSH24OE07**	83-84	
13.	Optimization Techniques (Suggested for CSE -AIML branch)	**BSH24OE08**	85-86	
14.	Statistical Data Analysis using R	**BSH23OE04**	26-27	
15.	Advanced Materials & Characterizations	**BSH23OE05**	28-29	
16.	Neural Network and Fuzzy Logic Control	**BSH23OE06**	42-43	

Board of Studies–Computer Engineering

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS chairman
1.	Android App Development with Kotlin	**BCE23OE03**	52-53	

Board of Studies–Computer Science and Engineering (AIML)

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS chairman
1.	AI for Financial Modelling	**BCS23OE01**	40-41

Course Syllabus

Semester III

Program	B. Tech. I.T.				Semester		III
Course	Data Structures				Code		BIT23PC01
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge of:

1. Programming.
2. Problem solving skills

is essential

Course Objectives:

1. To learn and apply linear data structures and their applications.
2. To apply data structures such as trees and graphs to the applications.

Course Outcomes:

After learning the course, the students will be able to:

1. Apply the concepts of dynamic, static memory allocation to implement array and linked list.
2. Make use of abstract properties of stack and queue data structures to design solutions of problems.
3. Apply tree, symbol table and hash table data structures to search and update the data.
4. Make use of graph data structure to solve problems.

Detailed Syllabus

Unit	Description	Duration (Hrs)
1.	**Sequential and Linked Data Organization** **Concept of Data Structures:-** Concept of data, Data structure, linear and Nonlinear, Static and Dynamic memory allocation, Definition of ADT, Asymptotic Notations **Sequential Organization:** Single and multidimensional array and address calculation. **Linked Organization:** Concept of linked organization, Singly Linked List, Doubly Linked List, Circular Linked List (Operations: Create, Display, Search, Insert, Delete).	7
2.	**Stacks and Queues:** **Stack:** Concept of the Stack, Stack as an ADT, Implicit and Explicit Stack, Applications of stack. **Queue:** Concept of the Queue, Queue as an ADT, Types of Queues - Circular queue, Double-Ended Queue, and Priority Queue, Applications of Queue.	8
3.	**Trees** **Trees:** Trees terminology, Binary tree as an ADT. Conversion of the general tree to binary tree. **Concept of Binary Search Tree:** BST as ADT, Recursive and non-recursive algorithms for Binary Search Trees traversals. **Balanced Binary Tree:** AVL,Red and Black tree. **Symbol Tables & Hashing:** Symbol table- Static, Dynamic, hashing functions, collision techniques.	10
4.	**Graphs** **Graph:** Graph as an Abstract Data Type, Representation using adjacency matrix and adjacency list, Graph Traversal - Depth First Search & Breadth First Search,Minimum Cost Spanning Tree, Applications of graph.	5
	Total	**30**

Text Books:

1. John Canning, Alan Broder, Robert Lafore. *Data Structures & Algorithms in Python*. Addison-

Wesley Professional, October 2022.

Prior knowledge of:

1. Computer Programming and Problem Solving

is essential

Course Objectives:

1. To apply various Linear data structures such as Arrays, Linked List, Stack and Queue for solving problems.
2. To apply various Non Linear data structures such as trees and graphs for application development.

Course Outcomes:

After learning the course, the students will be able to:

1. Analyze the problem requirements and determine the most appropriate data structure to solve it.
2. Implement different search and sort methods.
3. Apply Linear Data Structures for solving various real life problems.
4. Apply Non-Linear Linear Data Structures for solving various real life problems.

Guidelines:

Continuous assessment of the laboratory is done based on overall performance and laboratory assignments performance of students. Each laboratory assignment assessment will assign marks based on parameters with appropriate weights. Suggested parameters for overall assessment as well as each laboratory assignment assessment include - Neatness and cleanliness in Experimental write-up, Efficient Code, Innovation, Interpretation of results and conclusions, Punctuality, Overall behaviour, attitude and performance.

Detailed Syllabus

Assignment No.	Suggested List of Assignments (Assignment on array and Linked List)(Any - 3)
1.	In a hospital management system, there's a requirement to maintain a record of patients waiting in the emergency room. **Implement a singly linked list to manage this queue efficiently.** The system should allow receptionists to add patients to the end of the queue, doctors to remove patients from the front of the queue for examination, and nurses to move patients up in priority if their condition deteriorates. Additionally, the system should provide functionality to display the current queue, search for specific patients, and update patient information as needed. The goal is to streamline the patient management process, ensuring timely and efficient care delivery in the emergency room.
2.	**Implement a doubly circular linked list** to efficiently manage customer orders in a retail management system. Each order consists of items with details like name, quantity, and price. The linked list structure should represent each order, with nodes corresponding to individual items. Essential functionalities include adding, removing, and updating items, as well as displaying order contents. The system must dynamically adjust to varying order sizes and offer search and retrieval capabilities for specific items. This implementation aims to streamline the order management process, ensuring quick access and updates within the retail system
3.	Consider a scenario where the trajectory of a projectile in a gravitational field needs analysis. The trajectory is modeled using a polynomial expression representing the projectile's height over time. For instance, the polynomial (H(t) = -4.9t2+20t+10) describes the height (H) as a function of time. **Utilize the singly circular linked list data structure to efficiently** manage and

	manipulate polynomial expressions like H(t) for accurate trajectory analysis. Implement functionalities for addition, subtraction, multiplication, and evaluation operations, ensuring optimal memory usage and computational efficiency. This solution will facilitate precise modeling and analysis of projectile trajectories, advancing scientific research and engineering applications.
4.	Imagine you are developing a system to manage student grades in a school. The grades are stored in a matrix where rows represent students, and columns represent subjects. However, most students do not take all subjects, resulting in a sparse matrix where most elements are zero. Given the sparse matrix representing student grades below, implement a solution using arrays to efficiently manage and manipulate the grades data: $\begin{bmatrix} 0 & 0 & 0 & 0 \\ 85 & 0 & 0 & 0 \\ 0 & 0 & 0 & 92 \\ 0 & 0 & 0 & 0 \end{bmatrix}$ Perform operations such as calculating the average grade for each subject, identifying students with the highest grades, and finding the subject with the highest average grade.
5.	Design an inventory management system for a warehouse where products are stored on racks and shelves. Each product is uniquely identified by a product ID and has attributes such as name, quantity, and price. Utilize a combination of arrays and pointers to efficiently manage the inventory. The system should allow for the addition of new products, updating of product quantities, and calculation of the total value of the inventory. Pointers should be employed to establish relationships between related products or track product movements within the warehouse. 1. Product ID: 101 - Name: Laptop - Quantity: 50 - Price: $800 2. Product ID: 102 - Name: Smartphone - Quantity: 100 - Price: $500 3. Product ID: 103 - Name: Tablet - Quantity: 30 - Price: $400 Implement functionalities to add new products with their respective attributes, update the quantities of existing products, and calculate the total value of the inventory based on the quantities and prices of the products. Utilize appropriate data structure to create connections between similar products or track the movement of products within the warehouse.
(Assignment on Stack and Queue)(Any - 3)	
6.	Develop a stack-based to-do list application for managing tasks. Tasks consist of descriptions and priority levels. Implement functionalities to add, remove, and display tasks based on priority. Optimize memory usage and facilitate efficient task management using the stack data structure Consider the following initial tasks in the to-do list: • Task: Complete project proposal ○ Priority: High • Task: Schedule team meeting ○ Priority: Medium

	• Task: Review draft presentation o Priority: Low • Task: Prepare weekly report o Priority: High • Task: Respond to client emails o Priority: Medium.
7.	Write a program to convert infix expressions to postfix and prefix notation using stacks. Given an infix expression as input, the system should efficiently convert it to postfix and prefix notations, considering operator precedence and parentheses. Implement functionalities to handle operators, operands, and parentheses while ensuring correct expression conversion.
8.	Write a program for managing customer service requests in a call center. Each request includes customer details (name, contact information) and service requirements. Utilize a queue data structure to efficiently handle incoming requests, ensuring they are processed in a first-come-first-served manner. Implement functionalities to add new requests, process them sequentially, and track the status of ongoing requests. Consider the following initial customer service requests: • Request ID: 101 • Customer Name: John Doe • Service Type: Technical Support Request ID: 102 • Customer Name: Jane Smith • Service Type: Billing Inquiry Request ID: 103 • Customer Name: David Brown • Service Type: Product Information
9.	Implement a circular queue for managing customer orders in a drive-thru lane of a fast-food restaurant. Utilize the circular queue data structure to efficiently handle orders, ensuring fair processing and minimal waiting times. Implement functionalities to add new orders, process orders in a round-robin manner, and track the status of ongoing orders. Consider the following initial customer orders in the drive-thru lane: 1. Order ID: 101 - Items: Burger, Fries, Drink - Customer Name: Rahul Sharma 2. Order ID: 102 - Items: Chicken Sandwich, Salad, Drink - Customer Name: Priya Patel 3. Order ID: 103 - Items: Pizza, Wings, Drink - Customer Name: Aarav Gupta
(Assignment on Tree)(Any - 2)	
10.	Implement binary search tree and perform following operations: a) Insert (Handle insertion of duplicate entry) b) Delete c) Search d) Display tree (Traversal) e) Display - Depth of tree f) Display - Mirror image g) Create a copy h) Display all parent nodes with their child nodes i) Display leaf nodes j) Display tree level wise.
11.	Construct an Expression Tree from postfix or prefix expressions. Perform recursive and non-recursive In-order, pre-order and post-order traversals.
12.	Implement the AVL tree data structure to organize the contacts in the application. Design functions to add new contacts, search for contacts by name, phone number, or email address, and update contact information. Ensure that the AVL tree remains balanced and efficient as the

	number of contacts grows over time. Consider the following initial set of contacts that need to be stored in the AVL tree: 1. Contact ID: 101 - Name: Rahul Sharma - Phone Number: 9876543210 - Email Address: rahul@example.com 2. Contact ID: 102 - Name: Priya Patel - Phone Number: 1234567890 - Email Address: priya@example.com 3. Contact ID: 103 - Name: Aarav Gupta - Phone Number: 8765432109 - Email Address: aarav@example.com **Implement the AVL tree-based contact management system with functionalities to add, search, and update contacts efficiently.** Ensure that the AVL tree remains balanced and optimized for quick search operations as the number of contacts increases.
13.	Implement the B+ tree data structure to index the student records in the database. Design functions to add new student records, search for student records by student ID, and perform range queries to retrieve student records within a specified range of student IDs. Consider the following initial set of student records: 1. Student ID: 101 - Name: Rahul Sharma - Age: 18 - Grade: A 2. Student ID: 102 - Name: Priya Patel - Age: 17 - Grade: B 3. Student ID: 103 - Name: Aarav Gupta - Age: 19 - Grade: A Implement the B+ tree-based indexing system for student records with functionalities to add, search, and perform range queries efficiently. Ensure that the B+ tree maintains the necessary properties for efficient indexing and retrieval of student records.
(Assignment on Graph and Hashing)(Any - 2)	
14.	Implement a Graph data structure tailored for a social network, enabling the identification of mutual friends between users and also recommend new friends for a user based on mutual connections.
15.	Pimpri Chinchwad Municipal Corporation seeks an efficient solution for laying out a water pipeline network in a newly developed region. The objective is to ensure that every house within the area is connected to the pipeline network while minimizing the total cost of laying out the pipelines.
16.	Implement a basic student information system that utilizes hashing concepts to efficiently store and retrieve student records. The program should allow users to: • Add new student records. • Retrieve student information by their unique student ID. • Implement basic operations for managing student records.

17.	Write a program that implements a symbol table data structure to manage a collection of symbols (e.g., variables, functions) and their associated attributes in a programming language compiler. The program should allow users to: • Insert symbols into the symbol table. • Retrieve attributes of symbols. • Check for the existence of symbols. • Implement basic symbol table operations.
(Assignment on Searching and Sorting)(Any - 2)	
18.	Write a program to perform linear search for finding a specific contact in a phone book and return the contact's details.
19.	Write a program to perform binary search for finding a specific word in a sorted array of dictionary entries and return its definition.
20.	A teacher at a local school needs to organize the grades of students to generate their final report cards. The school recently adopted a new grading system, and the grades are stored in a list. Write a program to sort the grades of students using the insertion sort algorithm. Read the grades of students from a file named "grades.txt". Each line in the file consists of a single integer representing a student's grade. Implement the insertion sort algorithm to arrange the grades in ascending order. Display the sorted grades on the console. Save the sorted grades to a new file named "sorted_grades.txt".
21.	A meteorological station records daily temperature readings for a city over a certain period. The recorded temperatures are stored in a list, but due to various reasons, the data might not be in the correct order. Write a program to sort the daily temperature readings using the bubble sort algorithm: 1. Read the daily temperature readings from a file named "temperatures.txt". Each line in the file contains a single integer representing the temperature recorded on that day. 2. Implement the bubble sort algorithm to arrange the temperature readings in ascending order. 3. Display the sorted temperature readings on the console. 4. Save the sorted temperature readings to a new file named "sorted_temperatures.txt".

Program	B. Tech. I.T.			Semester		III	
Course	Computer Organization and Architecture			Code		BIT23PC03	
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge of:

1. Logic Design

is essential

Course Objectives:

1. To understand the structure, function & characteristics of computer systems.
2. To learn the Instruction Set Architecture and CPU organization.
3. To understand the design of the various functional units of computers.

Course Outcomes:

After learning the course, the students will be able to:

1. Interpret various components of computer and their interconnection.
2. Explain processor architecture & its functions.
3. Discuss the concept of Memory Subsystem
4. Illustrate the concepts related to Input/ Output Subsystem.

Detailed Syllabus

Unit	Description	Duration (Hrs)
1.	**Basic Structure of Computer** Organization and Architecture, Structure and Function, Evolution of the Intel x86 Architecture, Performance, Multicore CPU. A top level view of Computer function and interconnection: Computer Components, Computer Function, Interconnection structure, bus interconnection , Harvard and Von Neumann Architecture, Performance, Multiprocessors and Multicomputer.	7
2.	**CPU Design** CPU Organization, Hardwired Control, Micro-programmed Control, Instruction formats, Instruction sets, Types of operations, Instruction set architectures - CISC and RISC . Organization of a processor - Registers, ALU and Control unit, Instruction cycle, Instruction Pipelining, Addressing Modes**,** Interrupts.	8
3.	**Memory Subsystem** Computer Memory System Overview, Memory Hierarchy : Semiconductor Memories, DRAM,SRAM, Read Only Memory (ROM), Types of ROM, Error Corrections , Magnetic Disk, RAID, SSD, HDD, Optical Memory ,Cache Memory: Principles, Elements of Cache Design: Cache Addresses, Cache Size, Mapping Function, Replacement Algorithms, Line Size, Multilevel cache	8
4.	**I/O Subsystem** External Devices , I/O Modules: Module Function, I/O Module structure , Programmed I/O: Overview, I/O commands, I/O instructions, Memory mapped I/O, Interrupt Driven I/O: Interrupt Processing , Interrupt Controller, Direct Memory Access : DMA Function, Intel 8237A DMA Controller , I/O Device Interfaces	7
	Total	**30**

	Lecture	Practical	Tutorial	TW	OR	PR	Total
2	-	4	-	50	-	50	100

Prior knowledge of:

1. Problem Solving skill
2. Programming language

is essential

Course Objectives:

1. To apply the concepts of object oriented paradigm.
2. To design and implement models for real life problems by using object oriented programming.
3. To develop object oriented programming skills.

Course Outcomes:

After learning the course, the students will be able to:

1. Apply the concept of class and objects to solve real life problems.
2. Construct hierarchy of classes through inheritance and polymorphism.
3. Apply the exception handling and file handling for real world applications.
4. Build an object-oriented solution to solve a real-life problem.

Guidelines:

- All topics listed below must be covered through assignments.
- Continuous assessment of laboratory work should be based on parameters, such as timely completion, performance, innovation, efficient codes, and punctuality.
- Mini project assessment will be based on parameters such as Understanding of Project Topic, Implementation, Demonstration and Team Work.

Recommended Tools: Java, Intellij IDE

Detailed Syllabus

Assignment No.	Suggested List of Assignments
1	**Classes, objects and constructors:** Implement a program to create a class called "Person" with a name and age attribute. Create two instances of the "Person" class, set their attributes using different types of constructor, and print their name and age.
2	**Array of Objects:** Consider the class City having variable Name and Population. Implement a program to display details of five different cities.
3	**Encapsulation-packages, access modifiers, and data hiding:** Develop a Java-based banking system tailored for the PCCOE Cooperative Bank to facilitate account management and transactions. The assignment requires implementing the following functionalities: ▪ Add Account ▪ Remove Account ▪ Deposit Money ▪ Withdraw Money
4	**Inheritance and aggregation:** Implement application for **a library catalog system** showcasing inheritance with a base class "Item" representing library items like books and DVDs, and derived classes for specific item types. Utilize aggregation by allowing each "Library" object to aggregate multiple instances of "Item" objects stored in its collection.

5	**Polymorphism: method overloading:** Implement program for a geometric shapes application that utilizes function overloading for calculating properties such as area and perimeter. Implement overloaded methods for computing area and perimeter for different shapes (e.g., rectangles, circles, triangles) with varying sets of parameters.
6	**Polymorphism: Method overriding:** Develop an application for a social media platform showcasing method overriding. Implement a base class "Post" with methods for posting and commenting, and derived classes representing different post types (e.g., text post, image post) overriding these methods with specific functionality.
7	**Abstract classes:** Develop an application for a university's course registration system using abstract classes. Implement an abstract class "Course" with common attributes such as course code, title, and credits, and abstract methods for enrolling students and displaying course details. Derived classes representing specific course types (e.g., Information Technology, Mechanical Engg) extend the "Course" class and provide concrete implementations for student enrollment based on course-specific requirements.
8	**Interface:** Create an application for a transportation system where different modes of transport (e.g., car, bus, train) demonstrate polymorphism in their pricing strategies. Implement a common "Transport" interface with a polymorphic method for calculating fares, and each transport type overrides this method to apply its specific fare calculation logic.
9	**Multithreading:** Design an application for performing matrix multiplication using multithreading to improve performance. Implement a matrix multiplication algorithm that divides the computation across multiple threads, with each thread responsible for computing a subset of the resulting matrix.[Use concept of exception handling in implementation]
10	**I/O: reading and writing to files, streams**: Develop a Java program for analyzing log files using I/O operations to read and process log data from files. Implement a log file reader that reads log entries from a text file and analyzes them to extract useful information such as error counts, warning messages. Utilize file streams and buffered readers to efficiently read log files line by line and perform analysis tasks.
11	**Factory Design Pattern:** Develop a solution that demonstrates the use of the Factory design pattern for selected application. Implement the Factory pattern in a way that promotes code reusability, scalability, and maintainability.
12	**Strategy Design Pattern:** Implement and apply Strategy Design pattern for selected application.

****** Implement a Mini Project using all the concepts of Object Oriented Programming**

The objective of this mini project is to let the students apply the programming knowledge into a real- world situation/problem and expose the students how programming skills helps in developing a good engineer. The mini project MUST be done in a group of 3-4 students. Each group MUST prepare a title that relates to Object Oriented Programming concepts and real-world situations.

Sample Mini Project:

- Student Management System
- Library Management System
- Airline Reservation System
- Hospital Management System
- Hotel Management System
- Billing System
- Bus / Railway Reservation System
- Build a Snakes & Ladders game
- Sudoku Solver
- Maze generator
- Dictionary implementation

Program	B. Tech. I.T.				Semester		III
Course	Data Science Laboratory				Code		BIT23VS01
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	TW	OR	PR	Total
2	-	4	-	50	-	50	100

Prior knowledge of:

1. Linear algebra
2. Programming Skills

is essential

Course Objectives:

1. To learn how to manipulate datasets using Python libraries.
2. To apply data pre-processing techniques and interpret through various graphs.
3. To build a strong statistical and algorithmic foundation to infer insights.

Course Outcomes:

After learning the course, the students will be able to:

1. Demonstrate Data Science tools and Environment.
2. Apply pre-processing techniques and visualize the data using Python libraries.
3. Analyze different types of data modeling algorithms.
4. Summarize the report on the Data Science application.

Guidelines:

1. Laboratory Instructors may design a suitable set of assignments for each topic. All topics should be addressed. For every topic, at least three lab assignments should be framed and approved during the module meeting.
2. For each laboratory assignment, it is essential for students to write the title, aim, topic theory, algorithm, mathematical background, and data set description (as applicable).
3. Laboratory Journal- Program codes with sample output of all performed assignments are to be submitted as softcopy.
4. Term Work –Term work is a continuous assessment that evaluates a student's progress throughout the semester. Laboratory Instructors may design rubrics to assess assignments and mini-projects.
5. Practical Examination should be conducted on a given list of topics.

Detailed Syllabus

Sr. No.	List of Topics (Write a program in Python)
1.	**Data Science Tools and Environment, Python programming basics** · Introduction to the laboratory environment (e.g., Jupyter Notebook, Python IDEs) · Introduction to the Data Science · Python Programming for Data Science · Python Data Structures · Introduction to data manipulation libraries (e.g., Pandas, NumPy, MatPlotlib)
2.	**Data Acquisition and Cleaning** · Data importing from various sources (CSV, JSON, SQL databases) · Data scraping techniques (web scraping, API integration) · Data cleaning and preprocessing (handling missing values, outliers, etc.)

3.	**Data Visualization and Exploratory Data Analysis (EDA)** · Data visualization libraries (e.g., Matplotlib, Seaborn) · Exploratory Data Analysis techniques (summary statistics, data distribution analysis, correlation analysis)
4.	**Statistical / Algorithmic Data Modeling** · Hypothesis testing, probability distributions, etc. · Basics of classification and regression algorithms · Model evaluation techniques (performance metrics) · Hands-on exercises with sci-kit-learn library
5.	**Mini-Project Development and Presentation** · Development of Mini-Project and its presentations diverse examples of case studies in data science for Mini-project Predictive Maintenance in Manufacturing, Churn Prediction in Telecom Industry, Fraud Detection in Financial Transactions, Healthcare Predictive Analytics, etc.

Prior knowledge : NIL

Course Objectives: This course aims at enabling students :

1. To help the students to gain understanding of various perspectives in the field of Strategic Management
2. To enable the students to pursue the modern management practices in business.
3. To provide the students an understanding about tools and techniques of economic principles in business management.

Course Outcomes:

After learning the course, the students will be able to:

1. **Explain** the concept of Management and Strategic Management processes through case studies.
2. **Illustrate** the Management Trends and Practices implied in Global Work Culture.
3. **Identify** the role of economic variables in business economy.
4. **Analyze** the business expansion strategies abroad and key issues related to their operations.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Introduction to Management & Strategic Management: Journey towards Goals** Concepts of Management, Definition of Management, Functions of Management, Levels of Management, Concept of Strategic Management, Strategic Management Process- Vision, Mission, Goals, Objectives, Hierarchy of Objectives, Situational Analysis / Internal and External Analysis Organizational Goals, Planning Through MBO- Practical Insights, Michael Porter 5 Forces Analysis, Balanced Score Card(BSC), BSC v/s MBO. Latest Case Studies on Strategic Management: for example Starbucks Corporation, TATA Steel.	7
2	**Management Trends and Practices - Let's Explore** Comparative Management Styles and approaches: Japanese Management Practices, Organizational Creativity and Innovation, Management of Innovation, Entrepreneurial Management: Benchmarking, Best Management Practices across the world, Selected case Studies of Domestic & International Corporations- Management of Diversity.	7
3	**Business Economics – The Road Map** Concept and Definition of Micro Economics and Macro Economics, Nature & Scope, Demand, Supply and Market equilibrium: Individual demand, Market demand, Individual supply, Market supply, Market equilibrium; Elasticity's of demand and supply; Price elasticity of demand, Income elasticity of demand, Cross price elasticity of demand, Elasticity of supply, Business cycle, Demographic Profile of Indian Population and Market, Urbanization.	8

4	**International Business –Let's Go Global** Basic concept, Decision framework, Analyzing marketing opportunities – collection and analysis of marketing information, Modes of entering overseas markets, International Marketing process and techniques – direct exporting, Indirect exporting, counter trade, Licensing, Sub- contracting, Joint – ventures, Organization and control of international marketing operations, International tendering, Procurement for export; Export information system Global Business Environment, Innovation and International management, managing multinational market, Research Methods in International Business (RMIB).	8

				FA1	FA2		
2	2	-	-	20	30	-	50

Course Objectives:

This course aims at enabling students,

1. To appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings.
2. To facilitate the development of a holistic perspective among students to lead their personal and professional lives in an ethical way.
3. To highlight plausible implications of such a holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior, and mutually enriching interaction with nature.

Course Outcomes:

After learning the course, the students should be able to:

1. **Explain** the relevance of 'Universal Human Values'
2. **Develop** an understanding about human being as co-existence of 'Self' & 'Body'
3. **Apply** the sense of harmony in family and society
4. **Take part** in ensuring coexistence with nature by integrating Universal Human Values into personal and professional lives.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Introduction to Value Education:** ● Understanding Value Education ● Self-exploration as the Process for Value Education ● Continuous Happiness and Prosperity ● Right Understanding ● Current Scenario ● Method to fulfill the Basic Human Aspirations	3
	Practice Session: ● Sharing about Oneself ● Exploring Human Consciousness ● Exploring Natural Acceptance **Experiential Learning** ● Seva Activity	3

2	**Harmony in the Human Being:** ● Human being: the Co-existence of the Self and the Body ● Needs of the Self and the Body ● The Body as an Instrument of the Self ● Understanding Harmony in the Self ● Harmony of the Self with the Body ● Programme to Ensure Self-Regulation and Health	4
	Practice Session: ● Exploring the Difference between Needs of Self and Body ● Exploring Sources of Imagination in the Self ● Exploring Harmony of Self with the Body **Experiential Learning** ● Seva Activity ● Health Awareness Programme	4
3	**Harmony in the Family and in Society:** ● Harmony in the Family ● 'Trust'—the Foundational Value in Relationship ● 'Respect'—the Right Evaluation ● Other feelings (Values) in Human-to-Human Relationship ● Understanding Harmony in Society ● Vision for the Universal Human Order ● Five Dimensions of Human Order	4
	Practice Session: ● Exploring the Feeling of Trust ● Exploring the Feeling of Respect and Exploring Systems to Fulfil Human Goal **Experiential Learning** ● Seva Activity	4
4	**Harmony in Nature/Existence:** ● Understanding Harmony in Nature, ● Realising Existence as Coexistence at All Levels ● The Holistic Perception of Harmony in Existence **Implications of Holistic Understanding: A Look at Professional Ethics:** ● Definitiveness of (Ethical) Human Conduct ● Humanistic Constitution and Universal Human Order ● Competence in Professional Ethics ● Holistic Technologies, Production Systems and Management Models-Typical Case Studies ● Strategies for Transitioning towards Value-Based Life and Profession.	4

	Practice Session: ● Exploring the Four Orders of Nature ● Exploring Co-existence in Existence ● Exploring Ethical Human Conduct ● Exploring Humanistic Models in Education ● Exploring Steps of Transition towards Universal Human Order **Experiential Learning Activity** ● Health Awareness Programme/Waste Management Programme (Hospital Waste/Pharmaceutical Industrial Waste/Reduce Plastic Waste / E-Waste Management)	4

Prior knowledge of

- Fundamental knowledge of electromagnetism & electrical parameters.

is essential.

Course Objectives:

This course aims at enabling students,

1. To impart basic knowledge for conceptual understanding of DC machines.
2. To explore the construction and performance characteristics of three phase AC machines.
3. To explore the construction and performance characteristics of single-phase AC machines.
4. To relate the applications of electrical machines to practical and industrial scenarios.

Course Outcomes:

After learning the course, the students should be able to:

1. Describe the constructional features and working principles of DC Machines.
2. Explain the constructional features and operation of three phase induction motors
3. Explain the constructional features and operation single phase induction motors
4. Relate the applications of electrical machines to their respective fields of study and industrial applications.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Introduction to Electrical Machines:** Overview of electrical machines and their significance, Classification of electrical machines, Fundamental principles: Faraday's Law, Lenz's Law, and Electromagnetic Induction. **DC Machines** Working principle of DC machine as a generator and a motor; Types and constructional features; EMF equation of generator, DC motor working principle; Back EMF and its significance, torque equation; Types of D.C. motors, characteristics, Necessity of a starter for DC motor, Speed control methods of DC shunt and DC series motor and industrial applications.	8
2	**Three phase induction motor** – constructional features, working principle, Rotating magnetic field, slip ring and cage types. slip, phasor diagram, expression for mechanical power and torque, torque-slip characteristics, starting torque, full load and pull-out torque, equivalent circuit. Industrial applications.	7

3	**Single phase induction motors:** Construction of single-phase induction motor, double field revolving theory. Types of single-phase induction motors: Split phase and shaded pole type induction motors, applications. Specifications of induction motors (KW rating, rated voltage, current rating, frequency, speed, class of insulation)	8
4	**Special Purpose Motors:** Construction, principle of working, characteristics ratings and applications of Brush less D.C. motors, Stepper motors (permanent magnet and variable reluctance type only), Permanent Magnet motor (A.C. & D.C.), SRM Switch reluctance motor.	7

Prior knowledge of Linear Algebra & Differential Calculus **is essential.**

Course Objectives:

This course aims at enabling students,

1. To develop an understanding of students related to signal representation, classification, and operations.
2. To build the understanding of analyzing and classifying the systems and their applications
3. To apply the basic concept of Fourier transform and Laplace transform to the systems

Course Outcomes:

After learning the course, the students should be able to:

1. Represent, classify, and perform the operation on signals
2. Classify the system and utilize convolution for system analysis
3. Apply the basics of Fourier transform to analyze the signal in frequency domain
4. Apply the basics of the Laplace transform to analyze the signal in a complex frequency domain.

Detailed Syllabus:

Unit	**Description**	**Duration [Hrs]**
1	**Introduction to Signals**: Representation of Standard signals, Classification of signals: Continuous-time and discrete-time signals, Periodic Signals and non-periodic, Operations on signals: Time shifting, Time reversal, Time scaling, Amplitude scaling, Signal addition, Subtraction, Signal multiplication.	**07**
2	**Introduction to System**: System Definition and Application, Classification of Systems: Continuous-time and Discrete-time systems, Linear and Non-Linear systems, Time variant and Time-invariant systems, Stable and Unstable systems, Causal systems, and non-causal systems. Convolution sum using graphical method.	**07**
3	**Fourier Transform**: Fourier Transform (FT) representation of aperiodic continuous time (CT) signals, Evaluation of magnitude and phase response, FT of standard CT signals, Application of Fourier transform	**08**
4	**Laplace Transform and Z Transform**: Definition of Laplace Transform (LT), ROC, Laplace transform of standard periodic and aperiodic functions, Inverse Laplace transform, Application of Laplace transforms.	**08**

Prior knowledge of: Basics of Statistics and Probability
is essential.

Course Objectives: After completion of the course, students will have an adequate background, conceptual clarity, and knowledge of mathematical principles related to data, preprocessing techniques for data visualization, and statistical techniques for prediction and decision-making.

Course Outcomes:

After learning the course, the students should be able to:

1. **Understand** the data and different R packages related to data science and its access.
2. **Make use of** data pre-processing methods and generate quality data for analysis.
3. **Apply** different data visualization techniques to understand the data.
4. **Analyse** the data for decision-making using statistical methods.

Detailed Syllabus:

Unit	**Description**	**Duration [Hrs]**
1	**Fundamentals of R Software for Data** Introduction to Data: Definition, Types and Properties, R Packages for Data Science, Importing and Exporting Data in R Software, Accessing Databases with R Software.	**7**
2	**Data Wrangling** Pre-processing Data in R Software, Dealing with Missing Values in R Software, Data Formatting in R Software, Data Normalization in R Software, Binning in R Software, and Conversion of type of data	**7**
3	**Data Visualization** Data visualisation for various data categories like Categorical, Numerical, or both using plots likeHistogram, Bar/ Line Chart, Box Plots (including group-by option), Scatter Plots, Mosaic Plot, etc., and their interpretations	**8**
4	**Data Analysis** Sampling, Descriptive Statistics, Linear regression and Multiple linear regression. Model evaluation using visualization, prediction, and decision-making.	**8**

Prior knowledge of basic physics, chemistry and nanotechnologyis essential**.**

Course Objectives: This course aims at enabling students,

1. To learn the principles of advanced materials, technologies and characterizations.
2. To undertake research projects with applications of advanced materials.

Course Outcomes:

After learning the course, the students should be able to:

1. Interpret structure, properties and applications of advance engineering materials.
2. Explain the properties and requirements of materials for some advanced applications
3. Analyze structural, optical, elemental & morphological properties of the materials
4. Interpret electrochemical & thermal properties of the materials

Detailed Syllabus:

Unit	**Description**	**Duration [Hrs]**
1	**Engineering Materials** Polymer Composite eg. fiber- reinforced polymer (FRP) composites Advanced carbon materials eg. Graphene & CNT Alloys: a] Nano alloy eg. Cu-Ni nano alloy b] Memory alloy-Nitinol CdSe Thin films for solar cells.	**7**
2	**Materials for Special applications** Battery and Supercapacitor: working principles, components, Superconductors, material requirement and properties of electrodes, electrolytes and spacers, metallic, nonmetallic and ceramic superconductors, Applications, Gas Sensing: working principle and required material properties. Substrate Materials for quantum computer, Invar and Elinvar Materials: properties and applications, 2D materials: properties and their applications	**7**
3	**Structural, Optical, Elemental & Morphological Characterizations** X-Ray Diffraction and phase identification, indexing lattice parameter determination, Grain size analysis, EDAX, Electron microscopy, scanning electron microscopy, Transmission electron microscopy (TEM), Fourier Transform Infrared Spectroscopy, Band gap measurements-UV Vis- IR Spectroscopy	8
4	**Electrochemical Characterization** Cyclic voltammetry: Instrumentation, current-potential relation applicable for Linear Sweep Voltammetry (LSV) and Cyclic Voltammetry (CV), interpretation of cyclic voltammograms, charging-discharging behaviors of supercapacitor and batteries. **Thermal Analysis techniques:** Thermo-gravimetric analysis (TGA),Differential thermal analysis (DTA) analysis, Thermal expansion measurements, Thermal conductivity measurements, Ionic conductivity measurements. Specific heat capacity measurements, Debye temperature measurements	8

Prerequisite : Nil

Course Objectives:

This course aims at enabling students,

1. To Aquitaine students about materials, their properties, and structure property relationship.
2. To create awareness about the importance of materials information in engineering.

Course Outcomes:

After learning the course, the students should be able to:

1. Compare different materials based on their structures.
2. Relate the structure of materials with their properties.
3. Understand the structure and properties of metals, polymers, ceramics and composites.
4. Explore advanced materials in engineering applications.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	Introduction to materials: Classification of materials, structure of materials :Atomic structure, crystal structure and microstructure, material properties: Physical, Mechanical, Electrical, Magnetic etc.	8
2	Metals: Ferrous, non ferrous, alloys, structure and properties of commonly used metals, applications of metals in engineering.	7
3	Polymers: Structure of polymers and their properties, Thermoplastic and thermosetting plastics, advanced polymers such as temperature resistant polymers, shape change polymers, conducting polymers Ceramics: Structure of ceramics and their thermal, electrical and magnetic properties, applications of ceramics in engineering.	8
4	Composites: Classification of composite materials and their applications. Advanced materials-shape memory alloy, hydrogel, thermo responsive, photo responsive, magneto responsive, piezoelectric materials, Processing of advanced materials such as semiconductors.	7
	Total	30

-

Course Objectives:

1. Develop imagination of physical objects for communication of Engineering Drawing.
2. Develop the interpretation and manual drawing skills.
3. Develop the physical realization of the dimension of the objects.

Course Outcomes*:

After learning the course, students will be able to

1. **Understand** the basics of Engineering Graphics and **apply** the concepts in real life applications
2. **Analyze** 3D engineering objects and draw orthographic projections
3. **Analyze** 2D views of engineering objects and draw isometric views
4. **Analyze** 3D objects and draw development of lateral surfaces of solid

Detailed Syllabus

Unit	Description	Duration (H)
1	**Part A: Introduction to engineering drawing** **Importance of engineering drawing to Civil, Electrical, Electronics, IT and Computer Engineers**, introduction to drawing instrument and their uses, drawing sheet layout and its sizes, types of lines and their applications, dimensioning terminology and methods **Part B: Projection of Points, Lines and Planes** Projection: Introduction to projection and different methods of projections, Projection of Point: Introduction, Point situated in all the quadrants. Projection of lines: Introduction, Projection of lines. Projection of Planes: Introduction, Types of planes, Projection of planes. **CPU circuit diagram, Electrical/Electronic board circuit diagram, Building floor plan**	**8**
2	**Orthographic projections** Orthographic projection of given real life components by first angle method of projection, types of sections.	**7**
3	**Isometric view** Isometric axes, scale, difference between isometric projection and isometric view, isometric view of simple solids and its dimensioning.	**8**
4	**Development of lateral surface of solids** Development of lateral surfaces of prism, pyramid, cylinder and cone. 3D and 2D drawing of branch specific industrial products and its lateral surface development.	**7**
	Total	**30**

Text Books:

2	**2**	**-**	**-**	**10**	**10**	**30**	**50**

Prerequisites: Nil

Course Objectives:

This course aims at enabling students,

1. Impart knowledge of mechanical engineering and describe the scope of mechanical engineering with multidisciplinary industries.
2. Impart knowledge of basic concepts of thermodynamics and heat transfer applied to industrial applications.
3. Understand, identify and get exposure to latest trends in manufacturing processes and materials.
4. Describe the fundamentals of automobile systems and the emerging trends of electric vehicles, hybrid electric vehicles and solar vehicles..

Course Outcomes:

After learning the course, the students should be able to:

1. **Identify** different materials and manufacturing processes for different applications.
2. **Apply** the fundamentals of thermodynamics and heat transfer to real life applications.
3. **Identify** the basic mechanical elements and the power transmission drives based on their applications.
4. **Comprehend** automotive system for the combustion vehicle, EV's, HEV's and solar vehicles..

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Materials and Manufacturing Engineering** Classification of materials, their properties and applications, phase change material (PCM), composite material. Introduction to manufacturing processes: classification and applications, sheet metal working and forging. Introduction to industry 4.0.	**8**
2	**Thermal Engineering** Introduction to thermodynamics: concept of a system, types of systems, energy interactions: heat and work, laws of thermodynamics, entropy, and modes of heat transfer, thermal resistance, insulation. Applications of hydraulic turbines, centrifugal pumps, compressor, household refrigerator, window and split air conditioner.	**7**
3	**Fundamentals of Design Engineering** Introduction to mechanical engineering: use of mechanical engineering in day to day life and its interdisciplinary use, Introduction to design thinking. Machine elements, power transmission drives and mechanisms.	**8**

4	**Automotive Engineering** Classification of automobile, specifications of two wheeler, four wheeler and multi axle vehicles, types of chassis layout and drives, working of I.C. Engine, gear boxes, clutch, brakes, drive train system. Emission standards. Concept and environmental importance of electric vehicles (EV), construction and working of EV, hybrid electric vehicles (HEV) and solar vehicles, challenges and future scope of EV's and HEV's.	**7**
	Total	**30**

8. Automobile Engineering Volume I- Dr. Kripal Singh, Standard Publishers Distributors, Eleventh edition, (2008).
9. Automation, production systems computer integrated manufacturing- MikellGroover, Pearson Publication, Fourth edition, (2014).
10. Automotive Electrical Equipment- P. L.Kohli, McGraw Hill Education (India) Pvt Ltd., First edition, (2001).

Program:	B. Tech. I.T.			Semester:		III	
Course:	**E-waste Management** (Offered by Civil Department) (Open Elective- Engineering Sciences)			Code:		BCI23OE01	
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA 1	FA 2		
2	2	-	-	10	10	30	50

Prior Knowledge:

1. Fundamentals of environmental science.
2. Fundamentals of sustainable development.

Course Objectives: This course aims at enabling students,

1. To impart the knowledge of issues and challenges of e-waste management.
2. To create awareness of potential health effects and risk associated with e-waste.
3. To build knowledge of e-waste legislation (policy and guidelines)and circular economy.
4. To get acquainted with recycling, recoveringand disposal techniques.

Course Outcomes: After learning the course, the students should be able to:

1. Identify the issues and challenges of e-waste management for a sustainable environment.
2. Analyze potential health effects and risk assessment.
3. Illustrate e-waste laws and guidelines and apply a circular economy road map for an e-waste sustainable future.
4. Identify the e-waste recycling, recovery and disposal techniques and its significance for a sustainable future.

Detailed Syllabus

Unit	Description	Duration (H)
1	**Electronic Waste Management – Issues and Challenges:** Introduction to e-waste, classification and composition, need to manage / recycle, E-waste generation in India and comparison with world scenario; facts & figures, estimation of waste electronic and electrical equipment (WEEE), economic assessment of E-waste (Rare earth minerals, precious metals), effluents (solid, liquid and gas) generated during recycling, quantification of health hazard due to informal recycling of E-Waste,(Case study-based learning)	7
2	**E-Waste-Environmental and Public health issue:** Characteristics of Hazardous Substances, toxicity concerns, potential health effects and symptoms of long-term exposure, case study of heavy metal contamination due to E-Waste recycling, Introduction to risk assessment, epidemiologic data analysis and parameter for determining exposure and disease (numerical), classification of potential carcinogens, dose-response assessment, Potency Factor for Carcinogens (numerical), Hazard Index (HI) and Hazard Quotient (HQ) (numerical)	8
3	**E-waste (Management & Handling) Rules / Guidelines and circular economy:** Regulatory frameworks in India, objectives of e-waste rules, hazardous and other wastes (Management and Transboundary Movement) Rules, 2016, application of rules to stakeholders, objectives of e-waste rules, India's stand on liberalizing import rules, UN Sustainable Development Goals (SDGs) and e-Waste, circular economy startup in India	7

	with a case study.	
4	**Recycling and Recovery of Metals from Electronic Waste and disposal techniques:** E-waste recycling machineries, recycling process of E-Waste, existing E-Waste recycling Techniques, case study/ examples (metal recovery process), mechanism of extraction of precious metal from leaching solution, recovery of precious metals from solutions by solvent extraction, extraction of precious and rare earth metals from End-of- Life (EOL) electronic products, disposal techniques, role and responsibility of extended producers' responsibility (EPR), E-waste economy in the organized and unorganized sector, Case study on recycling and precious metal recovery from e-waste.	8
	Total	30

Pre-requisite: Basics of Human Anatomy and physiology
Basics of Electronics Engineering

Objectives:

1. To introduce biological engineering principles, procedures needed to solve real-world problems.
2. To provide an overview of human anatomy and physiology in order to support biomedical engineering solutions.
3. To introduce biomedical sensors, signal processing and diagnostic systems.
4. To provide a basic knowledge of the applications of biological systems in relevant industries.

Outcomes:

After completing the course the students should be able :

1. to understand basics of human physiological system and its cell functioning
2. to understand human immune system and significance of microbiology
3. to map role of biology in designing industrial applications
4. to understand biomedical sensors, its interfacing and related to measurement systems.

Detailed Syllabus:

Unit	**Description**	**Duration (Hrs)**
1	**CELL PHYSIOLOGY :** Introduction to the cell biology – Cell size and shape - Chemical composition - Classification of cell and its properties, Cell cycle; Cell signaling, Transport across cell membrane; Introduction to Human physiology – Circulatory system - Respiratory system - Excretory system - Nervous system.	08
2	**IMMUNOLOGICAL SCIENCE:** Immune system and its types; Functional properties of antibodies; Helper T cells and T cell activation; Importance of Microbiology.	07
3	**BIOLOGY AND ITS INDUSTRIAL APPLICATION:** Introduction : Bioreactors, biocontrol, biofilters, biopolymers, bioenergy, biomaterials, biochips, Nano-Biomolecules and its various types: Principles and Application of Biosensor; Basics of Biochips – Bio fertilizer – Bioinformatics – Bio fuel.	07
4	**INTRODUCTION TO BIOMEDICAL INSTRUMENTATION:** Need and Challenges in measurement of the parameters in living systems, Source of bioelectric potential: Resting and action potential, propagation of action potential, depolarization and re-polarization. Introduction to few important bio-potential such as Electrocardiogram(ECG), Electroencephalogram(EEG) and Electromygram (EMG).	08
	Total	**30**

Program:	B. Tech. I.T.						Semester: III
Course:	**AI for Financial Modelling** (Offered by CSE(AI&ML)) (Open Elective- Department Specific)						Code: BCS23OE01
Credit	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
02	02	-	-	10	10	30	50

Prior knowledge of basic Mathematics **is essential.**

Course Objectives:

1. To understand the essentials of financial modeling
2. To learn to build a simple financial model.
3. To perform the analyses of financial models and Apply AI/ML methods for forecasting
4. To use AI enabled platforms for finance tasks
5. To learn feature engineering, EDA and understanding with regards to financial data

.

Course Outcomes:

After learning the course, the students will be able to:

1. To learn the essentials of financial modeling.
2. To build financial models and perform the analysis .
3. To apply AI/ML methods for financial forecasting.
4. To use AI enabled tools and platforms for finance tasks.

Detailed Syllabus

Unit	Description	Duration (H)
1	**Financial Basics:** Introduction to financial statements: The Accounting Equation, Balance Sheet, Income Statement, Cash Flow Statement. Excel Basics - Formatting, Reports and Charts, Introduction to the Excel Model – Functions and features, building a financial forecasting model using excel..	7
2	**Financial Modeling and analysis:** Introduction to financial modeling, Build an integrated financial statement model, modeling of sales, modeling of taxes and payments, modeling of payroll, modeling of external services, profit and loss analysis, cash flow analysis, debt modeling and its analysis, Equity modeling and analysis	8

3	**AI for Finance:** Introduction to AI, Need, Visualization, EDA, Preprocessing and Feature Engineering of Financial Data with Python. Introduction to Responsible AI in Finance. Financial forecasting – Case study: Stock data preparation–time series analysis: univariate or multivariate, tree-based machine learning techniques of stock prediction, stock price prediction using ANN/DNN/ LSTM. Case study: Predicting currency exchange rates with multi-layer perceptron OR Case study: Loan Approval Prediction using Gradient Boosting classifier	8
4	**AI enabled tools for finance:** Use cases for finance professionals for ChatGPT and AI-enabled tools - FinGPT, Use Case of Getting a Specific Accounting treatment using Prompt Strategy. Introducing ChatPDF and analyzing financial statement, Creating your own chatbot on accounting policies, Creating Sample Financial Models for decision making.	7

Prior Knowledge: Nil

Course Objectives:

This course aims to enable students to get acquainted with,

1. Knowledge of Neural Networks and its use for controlling real-time systems.
2. Knowledge about fuzzy set theory to solve various engineering problems.

Course Outcomes:

After learning the course, the students will be able to:

1. Compute feedforward Artificial Neural Network output using basic concepts related to Artificial Neural Network.
2. **Apply** backpropagation and optimizer algorithms to update weights of Neural Networks and application-based problem-solving.
3. Find fuzzification and defuzzification of crisp function using basic Fuzzy set theory concepts.
4. **Apply** a fuzzy logic control system to handle uncertainty and some engineering problems.

Detailed Syllabus

Unit	Description	Duration [Hrs]
1	**Architecture of Neural Network:** Introduction, Biological Neural Network, Artificial Neural Network The architecture of Artificial Neural Networks- Bias, Activation Function, Learning Methods, Learning rules, Types of Neural Networks: Single-layer, multi-layer, feed-forward, and recurrent neural networks.	7
2	**Neural Networks For Control:** Loss function, Weight initialization, Optimizers algorithms, Backpropagation Algorithm, Associative Memory Networks and their types, Discrete-time hop field networks	8
3	**Fundamental of Fuzzy Logic:** Fundamental of Fuzzy Logic: Classical sets, Fuzzy Sets, Membership function, Cardinality of fuzzy set, Fuzzy complement, Fuzzy Composition, properties and operation on Fuzzy sets, Fuzzy Relation, Fuzzification, Defuzzification	7
4	**Fuzzy Logic Control:** Fuzzy Rule, Decision-making Logic, Linguistic variables Fuzzy Inference System: Mamdani FIS, Sugeno FIS Design of fuzzy controller, fuzzy optimization, applications of FIS to some real-life problem	8

Prior knowledge of Basic programming skills, Mathematical skills i**s essential.**

Course Objectives:

This course aims at enabling students,

1. To introduce revolutions of manufacturing industry
2. To introduce technological advancement in modern manufacturing industries
3. To Introduce concepts of smart manufacturing, emphasizing Industry 4.0 in manufacturing industries

Course Outcomes:

After learning the course, the students should be able to:

1. Correlate the recent manufacturing trends and technological pillars of Industry 4.0.
2. Apply pillars of Industry 4.0 to the manufacturing industry.
3. Adapt the changes in existing manufacturing practices and relate the role of industrial robotics and sensors.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Industrial revolution and current state of industry:** Overview of industrial revolution, Introduction to Automation, hard automation, soft automation, classification of production system, adaptive control, overview of terminologies like CAD, CAM, CAE, CAPP etc.	**06**
2	**Introduction to Industry 4.0:** Introduction to industry 4.0, need for Industry 4.0, Framework for Industry 4.0, technological pillars in industrial 4.0, applications, challenges and scope for industry 4.0	**08**
3	**Technological developments in Industry 4.0:** Introduction to Smart Manufacturing, overview of big data and analytic techniques, cyber security, Internet of things (IoT), Industrial Internet of things (IIoT), Cloud computing, artificial intelligence.	**08**
4	**Robotics and Sensors:** Introduction to technological components of Robot, classification of sensors and its applications in Manufacturing industry, Role of robots in Industry 4.0, Internet of Robotic Things, Cloud Robotics, and Cognitive Architecture for Cyber-Physical Robotics	**08**
	Total	**30**

Text Books:

1. Nine pillars of technologies for Industry 4.0, W. Leong, IET publishers, 2020
2. Industry 4.0, A. Gilchrist, Apress Publication, 2016
3. Industrial Automation: Hands On, Lamb, Frank. , McGraw-Hill Professional, 2013

Reference Books:

1. C. Schröder, The Challenges of Industry 4.0 for Small and Medium-sized Enterprises, 2021.
2. Chua C. K., Leong K. F., Lim C. S., Rapid Prototyping, World Scientific, 2012.
3. A. Nayyar and A. Kumar, A Roadmap to Industry 4.0: Smart Production, Sharp Business and Sustainable Development-Springer International Publishing, 2020. https://doi.org/10.1007/978-3-030-14544-6
4. K. Kumar, D. Zindani, J. P. Davim, Industry 4.0: Developments towards the Fourth Industrial Revolution, Springer Singapore, 2019.

Program :	B. Tech. I.T.	Semester: III	
Course :	**Energy Storage Management** (Offered by Mechanical Department) (Open Elective- Department Specific)	Code :	BME23OE05

Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge of Fundamentals of Engineering and basic sciences **is essential.**

Course Objectives:

This course aims at enabling students,

1. To explore energy storage systems' fundamentals, technologies, and applications.
2. To enable students to understand the principles of energy storage systems design.
3. To provide a general awareness of energy storage audit, safety, and management.

Course Outcomes:

After learning the course, the students should be able to:

1. Differentiate and select energy storage systems based on performance and safety.
2. Select material and analyze the energy storage in thermochemical form.
3. Analyze energy storage system with batteries/supercapacitors/fuel cells.
4. Perform audit of Energy storage systems

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Energy storage system:** Introduction, Need, Modes, Energy storage devices, Merits, and Demerits of different types of Storage, utilization, and system applications. **Performance:** Energy capture rate and efficiency, Discharge rate and efficiency, Dispatch ability and load flowing characteristics, Scale flexibility, durability, Cycle lifetime, mass.	**8**
2	**Thermochemical storage** – Types, Phase Change Materials (PCMs) and classifications, properties of the PCMs for different temperature ranges, Selection criteria of PCMs for heating and cooling in buildings, Application of PCM in energy storage. SHS mediums, Energy analysis of the latent heat storage based on different systems	**7**
3	**Energy Storage for transportation:** Mechanical Design and Packaging of Battery, Packs for Electric Vehicles, Advanced Battery-Assisted Quick Charger for Electric Vehicles, Charging Optimization Methods for Li-ion Batteries, Thermal run-away for battery systems, State of Charge and Health Estimation Over the Battery Lifespan, Recycling of Batteries from Electric Vehicles **Fuel cell**: Operational principle, types, hybrid fuel cell-battery systems, hybrid fuel cell-supercapacitor systems,	**8**
4	**Energy Storage Management** Relationship between economic growth and energy use, Energy demand analysis in different economic sectors, increase energy conversion efficiencies by introducing energy storage, Energy audit of energy storage system, The carbon markets, Safety: Risks of fire, explosion, toxicity, Ease of materials, recycling, and recovery, Environmental consideration, and recycling	**7**

	Total	30

Program:	B. Tech. I.T.			Semester:			III
Course:	**Total Quality Management** (Offered by Civil Department) (Open Elective- Department Specific)			Code:			BCI23OE02
Credits	Teaching Scheme (Hrs/Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior Knowledge: Basic definitions of Quality and importance of Quality in industry for safety and durability.

Course Objectives: After Completing this course, student will have adequate background :

1. To understand the importance of Quality in construction.
2. To understand the need of Total Quality management &it's tools.
3. To understand role of ISO in quality management.

Course Outcomes: After learning the course, the students should be able to:

1. Articulate quality and quality ideas as presented by many gurus and philosophers after learning.
2. Illustrate different quality control tools.
3. Apply ISO concepts and the cost of quality to quality assurance.
4. Analyze various techniques of TQM.

Detailed Syllabus

Unit	Description	Duration (H)
1	**Unit I: Quality in Construction** a) Quality – Various definitions and interpretation. Importance of quality on a project in the context ofglobal challenges, Factors affecting quality, Reasons for poor quality & measures to overcome, Contribution of various Quality Gurus(Juran, Deming, Crossby, Ishikawa), b) Evolution of TQM- QC, TQC, QA, QMS, TQM.	7
2	**Unit II: TQM, Six Sigma and QC tools** a) TQM – Necessity, advantages, Quality Function Deployment(QFD), b) Six sigma – Importance, levels, Application of 6 Sigma, c) Implementation of 7 QC tools through case study.	8
3	**Unit III: Cost of Quality and ISO** a) Categories of cost of Quality, b) Study of ISO 9001 principles., Quality manual – Importance, contents, documentation, Corrective and Preventive actions, Conformity and NC reports.	7
4	**Unit IV: Techniques in TQM Implementation** a) Benchmarking in TQM, Kaizen in TQM, b) '5-S_techniques, Zero Defects, c)Quality Circle Concept and applications through Quality Circle Formation.	8
	Total	**30**

Text Books:

1. Total Quality Management-- Dr.GunmalaSuri and Dr. Puja Chhabra Sharma—Biztantra.
2. Quality Control and Total Quality Management by P.L.Jain- Tata McGraw Hill Publ.
3. Total Quality Management - Dr.S.Rajaram and Dr. M. Sivakumar—Biztantra.

4. Total Engineering Quality Management – Sunil Sharma – Macmillan India Ltd.

Reference Books:

1. Juran‘s Quality Handbook – Juran Publication. (2016 Edition)
2. Management –Principal, process and practices by Bhat – Oxford University Press.(2008)
3. Financial management by Shrivastava- Oxford University Press (6th Edition 2022)
4. Management Information Systems – Gordon B. Davis, Margrethe H. Olson – Tata McGraw Hill Publ. Co. (2022)
5. Total Project Management – The Indian Context - P.K.Joy Macmillan India Ltd.

Program:	B. Tech. I.T.			Semester:			III
Course:	**Building Services and Maintenance** (Offered by Civil Department) (Open Elective- Department Specific)			Code:			BCI23OE03
Credits	Teaching Scheme (Hrs/Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior Knowledge:
NA

Course Objectives: This course aims at enabling students,

5. To impart knowledge about the building services
6. To examine the purpose and type of building maintenance.

Course Outcomes: After learning the course, the students should be able to:

5. Understand different building services provisions.
6. interpret the fundamental concepts relevant to functional requirement of building.
7. Relate the knowledge of Acoustic and Fire Protection.
8. Choose diverse maintenance methodologies applicable to building and infrastructure services.

Detailed Syllabus

Unit	Description	Duration (H)
1	**Introduction to Building Services:** Definitions, Objective and uses of services, different types of building, Classification ofbased on Occupancy, FSI, Carpet area, built-up area, Standard of Accommodation, Classification of buildingservices, Types of services and selection of appropriate services for given project**,** case studies.	7
2	**Escalator and Plumbing-** Classification of different types of escalators, Lift codes and Rules,Design Features of Escalator, Plumbing- Common Sanitary Fixtures, Layout of SanitaryFixtures, Water Pipe Sizing in Buildings, Building Services Detailing, Rain WaterHarvesting, Sanitation in buildings.	8
3	**Acoustics and Ventilation-** Material properties, acoustical design of assembly halls and buildings, noise and itscontrol, measuring equipment, Ventilation- Ventilation systems, health and comfortventilation, Fire protection and National Building Codes 2016- requirements, equipmentand their applications, security systems.	8
4	**Building Maintenance:** Role of maintenance in durability and serviceability of structures, Economic aspects of maintenance, Different types of maintenance and audits process. **Infrastructures services:** Different types of structures, infrastructure services, case studies.	7
	Total	**30**

Text Books:

1. Building Construction Dr. B. C. PunmiaLaxmi Publications (P) Ltd., New Delhi

2. Building Construction P. C. Varghese PHI Learning (P) Ltd., New Delhi

3. Building repair and Maintenance Management P. S. Gahlot CBS Publishers & Distribution(P) Ltd.

Reference Books:

1. Building Science & Planning by S.V. Deodhar, Khanna Publishers.

2. Design and Practical Hand Book on Plumbing by C.R Mohan, VivekAnand, Standard Publishers Distributors.

3. Hand book of Designing and Installation of Services in High Rise Building Complexes, by V.K. Jain, KhannaPubl

Program:	B. Tech. I.T.					**Semester:** III	
Course:	**Android App Development with Kotlin** (Offered by Computer Engineering) (Open Elective- Department Specific)					**Code:** BCE23OE03	
Credit	**Teaching Scheme (Hrs./Week)**			**Evaluation Scheme and Marks**			
	Lecture	**Practical**	**Tutorial**	**FA**		**SA**	**Total**
				FA1	**FA2**		
02	**02**	**-**	**-**	**10**	**10**	**30**	**50**

Prior knowledge of Basic programming knowledge **is essential**

Course Objectives:

1. To explore Kotlin programming language features.
2. To familiarize with the concepts of Kotlin.
3. To get acquainted with Android features, networks, and data handling techniques.
4. To develop an Android app with testing.

Course Outcomes:

After learning the course, the students will be able to:

1. Explore object-oriented programming with Kotlin.
2. Illustrate the concept of Kotlin fundamentals
3. Apply the network handling and Android UI techniques.
4. Deploy the Android application with testing.

Detailed Syllabus

Unit	**Description**	**Duration (H)**
1	**Introduction to Kotlin programming language** Introduction to Kotlin programming language, Setting up Android Studio development environment, Basics of Kotlin syntax and basic programming concepts, Variables, data types, and operators in Kotlin.	6
2	**Kotlin fundamentals** Conditional statements, Loops, Functions, parameters, Kotlin collections, Classes and objects, Properties, fields, and methods, Inheritance, polymorphism, and interfaces, Data classes and sealed classes.	9
3	**Android architecture, Android UI and Networking** Android Architecture, Activities and life cycle, Views, View groups, fragments and lifecycle, Working with RESTful APIs and JSON data, Using Retrofit and OkHttp for network communication, Implementing LiveData and ViewModel, Asynchronous programming.	9
4	**Android App Development and Testing** Case study: Picture gallery, Developing an App, Unit testing and UI testing with Junit and Espresso, Preparing and publishing app to Google Play store	6

Total	30

Course Syllabus

Semester IV

Program	B. Tech. I.T.				Semester		IV
Course	Computer Networks Technology				Code		BIT24PC01
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge of:

1. Basic Mathematics
2. Fundamentals of communication

is essential

Course Objectives:

1. To understand TCP/IP and ISO OSI network layers and concepts of networking standards
2. To learn different techniques for framing, error control, flow control and routing
3. To understand various routing algorithms and modern network architectures with respect to design and performance

Course Outcomes:

After learning the course, the students will be able to:

1. Illustrate the working and functions of data link layer
2. Analyze the goals and requirements of Medium Access Control (MAC) techniques
3. Analyze the working of different routing algorithms
4. Illustrate role of application layer with its protocols, client-server architectures

Detailed Syllabus

Unit	Description	Duration (Hrs)
1.	**Unit I: Introduction To Computer Networks:** Evolution of Computer Networks, Layered Network Architecture: ISO's OSI Reference Model, functions of the seven layers of OSI Model , TCP/IP model, Physical Layer functions **Data Link layer:** Review of fundamentals of link layer protocols, Framing. **Error Detection and Correction:** need for error detection and correction, simple parity check, checksum, cyclic redundancy check, Hamming's code **Flow Control and Error Control** : need for flow and error control, Stop-and-wait flow control, Sliding-window flow control, Stop-and-wait ARQ, Go-back-N ARQ, Selective-repeat ARQ, Selective-repeat ARQ. HDLC: how HDLC works, piggybacking in HDLC, data transparency in HDLC.	8
2.	**Unit-II Medium Access Control:** **Medium Access Control (MAC) Techniques**- goals and requirements of Medium Access Control (MAC) techniques, key issues related to MAC techniques, Classify various contention based techniques such as ALHOA, CSMA, CSMA/CD and CSMA/CA. MAC techniques: Polling, Token passing. FDMA, TDMA, CDMA. **IEEE 802 LANs** - basic characteristics of LANs, operation of IEEE 802 LANs , 802.3 - CSMA/CD-based (Ethernet), 802.4 – Token bus based, 802.5 – Token ring-based, Compare performance of the three LANs , Introduction of High Speed LANs, Fast Ethernet and Gigabit Ethernet.	6
3.	**Unit-III Network Layer and Routing algorithms:** Introduction: Functions of Network layer. Switching Techniques: Circuit switching, Message Switching, Packet Switching. Compare circuit switching, packet switching, message switching.	9

	IP Protocol: Classes of IP (Network addressing), IPv4, IPv6,Network Address Translation, Sub-netting, CIDR. Network layer Protocols: IP, ICMP, IGMP. **Network Routing and Algorithms:** Static Routing, Dynamic Routing, Distance Vector Routing, Link State Routing, Path Vector. Routing Protocols: RIP, OSPF, BGP, MPLS. Congestion control and QoS.	
4.	**Unit-IV Transport Layer And Application Layer** Relationship Between Transport and Network Layer, Process to Process Delivery, Services, Socket layer (TLS 1.0 and 1.1). Elements of Transport Layer Protocols: Addressing, Connection establishment, Connection release, Flow control and buffering, Multiplexing, Congestion Control. Protocols: TCP and UDP, SCTP, RTP, Congestion control and Quality of Service (QoS), **Application Layer:** Application Layer: Address Resolution: Domain Name System (DNS). WWW: Hyper Text Transfer Protocol (HTTP) and HTTPS with SSL. Web Service. Email: SMTP, POP3,IMAP and Webmail. File Transfer: FTP, Dynamic Logical Addressing: Dynamic Host Control Protocol (DHCP), TELNET, SNMP.	7

Program	B. Tech. I.T.				Semester		IV
Course	Computer Networks Technology Laboratory				Code		BIT24PC02
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	TW	OR	PR	Total
2	-	4	-	50	-	50	100

Prior knowledge of:

1. Basic Mathematics
2. Fundamentals of communication

is essential

Course Objectives:

1. To learn computer network topologies, hardware, software and types of network
2. To develop an understanding of various protocols, modern technologies and applications
3. To learn modern tools for network traffic analysis
4. To learn network programming.

Course Outcomes:

After learning the course, the students will be able to:

1. Analyze the requirements of network types, topology and transmission media(Assignment No 1,2,3)
2. Demonstrate error control, flow control techniques and protocols and analyse them (Ass. No.4)
3. Demonstrate the subnet formation with IP allocation mechanism and apply various routing algorithms (Ass. No.5)
4. Implement client-server applications using sockets (Ass. No.6,7)
5. Demonstrate the configuration and working of various servers and networking protocols using Packet tracer simulator and analyze all the packets captured (Ass. No.8)
6. Analyze the working of application layer protocols (Ass. No.9)

Guidelines:

Continuous assessment of laboratory work should be based on parameters such as timely completion, performance, innovation, efficient codes, and punctuality. The laboratory assignments are to be submitted by students in the form of a journal. Journal consists of Certificate, table of contents, and write-up of each assignment.

Note:

Practical examination will be based on concepts implemented in assignments.

Detailed Syllabus

Assignment No.	Suggested List of Assignments (All assignments are compulsory)
1.	Demonstrate the different types of topologies and types of transmission media by using a packet tracer tool.
2.	Setup a wired LAN using Layer 2 Switch. It includes preparation of cable, testing of cable using line tester, configuration machine using IP addresses, testing using PING utility and demonstrating the PING packets captured traces using Wireshark Packet Analyzer Tool.
3.	Setup a WAN which contains wired as well as wireless LAN by using a packet tracer tool. Demonstrate transfer of a packet from LAN 1 (wired LAN) to LAN2 (Wireless LAN).
4.	Write a program for error detection and correction for 7/8 bits ASCII codes using Hamming Codes or CRC.
5.	Use packet Tracer tool for configuration of 3 router network using one of the following protocol RIP/OSPF/BGP.

6.	Write a program using TCP/UDP Sockets to enable file transfer (Script, Text, Audio and Video one file each) between two machines.
7.	Install and configure DHCP server.
8.	Capture packets using Wireshark, write the exact packet capture filter expressions to accomplish the following and save the output in file: 1. Capture all TCP traffic to/from Facebook, during the time when you log in to your Facebook account 2. Capture all HTTP traffic to/from Facebook, when you log in to your Facebook account 3. Write a DISPLAY filter expression to count all TCP packets (captured under item #1) that have the flags SYN, PSH, and RST set. Show the fraction of packets that had each flag set. 4. Count how many TCP packets you received from / sent to Face book, and how many of each were also HTTP packets.
9.	Study and Analyse the performance of HTTP, HTTPS and FTP protocol using Packet tracer tool.

Program	B. Tech. I.T.					Semester	IV
Course	Database Management System					Code	BIT24PC03
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge of:

1. Fundamentals of Data Structures and Files
2. Set Theory

is essential

Course Objectives:

1. To understand systematic database design approaches.
2. To learn the concepts of transaction processing and concurrency control..
3. To understand Database Architectures and Applications.

Course Outcomes:

After learning the course, the students will be able to:

1. Understand the basic concepts of Database.
2. Construct the database schema using ER and EER concepts.
3. Apply relational database techniques for applications.
4. Apply transaction management and concurrency control techniques within a database management system.

Detailed Syllabus

Unit	Description	Duration (Hrs)
1.	**Introduction To Database Concepts** Introduction, Purpose of Database Systems, Database Languages, Database System Structure, Data Models, Database and Application Architecture, Database Users and Administrators.	5
2.	**Conceptual Database Design:** Database Design and ER Model: Entity, Attributes, Relationships, Constraints, Keys, Design Process: Entity-Relationship Model, Extended E-R Features, converting ER and EER diagram into tables.	8
3.	**Relational Database Design** Relational Algebra, Relational Model: Basic concepts, Attributes and Domains, CODD's Rules, Relational Integrity: Domain, Referential Integrities, Enterprise Constraints; Database Design: Features of Good Relational Designs, SQL for relational database design.1NF, 2NF, Functional Dependency, 3NF, BCNF.	9
4.	**Database Transactions** Properties of Transactions, Transaction Management, Commit Protocols, Concept of Schedule, Serializability, Concurrency Controls, Deadlocks, Recovery methods: Shadow-Paging and Log-Based Recovery..	8
	Total	**30**

Text Books:

1. Silberschatz A., Korth H., Sudarshan S., *Database System Concepts*, 7th edition, McGraw Hill,2019
2. Connally T, Begg C., *Database Systems: A Practical Approach to Design, Implementation, and Management*, 6th edition, Pearson Education, 2021

Reference Books:

1. Ramakrishnan Raghu, Gehrke Johannes . *Database management systems*. 3rd Edition, McGraw Hill , 2011

E-sources:

Program	B. Tech. I.T.				Semester		IV
Course	Database Management System Laboratory				Code		BIT24PC04
Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	TW	OR	PR	Total
2	-	4	-	50	-	50	100

Prior knowledge of:

1. Logic and Set Theory.
2. Computer Programming and Problem Solving

is essential

Course Objectives:

1. To know design standards for database management systems.
2. To apply SQL commands to database management systems.
3. To apply No SQL commands to a database management system.

Course Outcomes:

After learning the course, the students will be able to:

1. Construct the database schema using concepts of ER, EER diagrams.
2. Apply SQL commands for various database applications.
3. Apply No SQL commands for various database applications,
4. Develop a mini project using database management concepts.

Guidelines:

Continuous assessment of laboratory work should be based on parameters such as timely completion, performance, innovation, efficient codes, and punctuality. The laboratory assignments are to be submitted by students in the form of a journal. Journal consists of Certificate, table of contents, and write-up of each assignment.

Note:

- Instructor should ensure all the important topics must be covered through assignments.
- Instructor should maintain the progress report of mini project.
- Practical examination will be based on concepts implemented in assignments.
- Mini Project in this course should facilitate the Project Based Learning among students

Detailed Syllabus

Assignment No.	Suggested List of Assignments
1.	**ER Modeling and Normalization:** a. Consider case studies and formulate a problem statement for application to be developed. b. Propose a conceptual design using ER features (Identifying entities, relationships between entities, attributes, keys, cardinalities, generalization, specialization etc.). c. Convert the ER diagram into relational tables and normalize relational data model.
2.	**SQL Queries-** Use Create, Select, Update, Delete with operators, functions, and set operator: a. Design and Develop SQL DDL statements which demonstrate the use of SQL objects such as Table, Index and different constraints etc. b. Write at least 10 SQL queries on the suitable database application using SQL DML Statements.
3.	**SQL Queries-** All types of **Join, Sub-Query and View**: a. Write at least 10 SQL queries for suitable database application using SQL DML statements using joins and subqueries.

	b. Write queries using group by and having clause.
4.	Write code to implement **Procedure and Function.**
5.	Write **cursor** code using control structures and exception handling.
6.	Write all types of **Database Triggers** for suitable application.
No SQL	
7.	**No SQL**: Design and Develop Queries using CRUD operations. (Use CRUD operations, SAVE method, logical operators, joins etc.).
8.	**No SQL**: Aggregation and Indexing: Design and Develop Queries using aggregation and indexing with suitable example using Mongo DB.

Mini Project

Using the database concepts covered , develop an application with following details:

1. Follow the same problem statement designed in Assignment 1.
2. Develop application considering: Front End : Java/Python or any other language
   Backend: MongoDB/ MySQL /Oracle.

Students should develop applications in group of 2-4 students and submit the Project Report which will consist of documentation related to different phases of Software Development.

	Lecture	Practical	Tutorial	TW	OR	PR	Total
2	-	4	-	100	-	-	100

Course Objectives:

1. Understand the needs of diverse sectors such as education, agriculture, environment, health, and community development etc
2. Design and implement solutions to address identified problems using available platforms.
3. To evaluate the impact of their solutions on the community and the environment.

Course Outcomes:

After learning the course, the students will be able to:

1. Identify the societal/community needs
2. Apply the knowledge, values, and relevant skills to solve the identified problem.
3. Develop the prototype/product in line with the social responsibility and ethics
4. Demonstrate communication skills through project reports, presentations, and interactions with community members, team members, and mentor.

Guidelines:

The purpose of the Community Engagement Project is to involve students in community development, service activities and apply the experience to personal and academic development. Refer to collaborative efforts that involve engineers working with local communities, addressing specific needs, solving their problems, improving living conditions, empowering communities, promoting collaboration, imbibing interdisciplinary approaches, and creating lasting impact and sustainability.

1. A group of 3-4 students can form a team. Students are required to identify real-life problems under the guidance of a mentor.
2. Fieldwork: The problem chosen will be relevant to societal needs, and students will undergo field visits under the guidance of the mentor to identify the community requirements.
3. After identifying and defining the problem, the plan of activities and methodology will be framed.
4. The project's outcome will be evaluated in terms of technical, economical, societal, environmental, political, and demographic feasibility and implementation.
5. Students are required to submit an authorization letter from the relevant authority, which may include representatives from the industry, community, or non-governmental organizations (NGOs).
6. It is mandatory to prepare a project report with plagiarism below 20%.
7. Each team member will prepare his/her contribution in one to two pages, highlighting the contribution majorly with a brief abstract of the total work and add it to the project report.

Evaluation Criteria

Sr. No.	Criteria	Marks
1.	Identification of project topic: The project demonstrates a significant positive impact on the community, addressing identified needs effectively	20
2.	Sustainability: The project demonstrates a clear plan for environmental sustainability	10
3.	Timely project completion	20
4.	Project report	20
5.	Project presentation and demo (Synopsis, Report, Video, Flyer, Poster)	30
	Total	**100**

Suggested List projects:

Environmental Projects:

- Urban Gardening
- Waste Management Awareness Campaigns
- River Cleanup Initiatives
- Tree Plantation Drives
- Solar Panel Installation in Low-Income Areas
- Smart Green Transportation
- Environmental Education Platform
- Community Garden Automation
- Sustainable Community Development Dashboard
- Sewage engineering
- Public health engineering
- Eco-Friendly Community Center Design
- Beach Cleanup Events
- Composting Initiatives
- Air Quality Monitoring System
- Smart Waste Management
- Water Quality Monitoring and Management
- Smart Irrigation System
- Forest Fire Detection and Prevention
- Noise Pollution Monitoring
- Green Building Monitoring
- Stormwater Management Projects etc.

Agriculture projects: Crop estimation, quality monitoring, crop information

Healthcare projects: Prediction of Diabetes, Cancer, Trauma Management and CRC Training, etc.

Smart City/Smart Home Requirement and Automation

Transportation optimization

Educational Initiatives:

- Technical Awareness Sessions such as Eureka- Increasing the literacy line:
- Educational Software Development
- Library Renovation Projects
- Science Fair Mentoring
- Coding Bootcamp for Youth
- Robotics Workshops for Kids etc.
- Open Source Contributions
- Digital Transformation Initiatives
- Data Analytics and Data Visualization
- Software Development Projects
- Network Design and Implementation
- IoT (Internet of Things) Projects
- Field Survey and Data Collection

	Lecture	**Practical**	**Tutorial**	**TW**	**OR**	**PR**	**Total**
2	-	2	-	100	-	-	100

Prior knowledge: Basic Mathematics & English

Course Objectives:

This course aims at enabling the students

1. To enhance the logical reasoning skills of the students and improve the problem-solving abilities.
2. To improve the overall professional development of students.

Course Outcomes:

After learning the course, the students will be able to:

1. **Apply** mathematical concepts to solve diverse numerical problems encountered in engineering, spanning arithmetic, algebra, geometry, and statistics.
2. **Employ** deductive reasoning, interpret data, and discern patterns to navigate complex logical puzzles and analytical challenges typical of engineering aptitude tests and professional scenarios.
3. **Identify** grammatical nuances, enhancing their verbal and written communication prowess essential for effective engineering discourse.

Detailed Syllabus:

Unit	**Description**	**Duration [Hrs]**
1	**Numerical Ability-I** HCF & LCM and Number System, Geometry, Ages, Allegations and Mixtures, Averages, Clocks and Calendars, Equations, Percentages, Profit and Loss, Ratios and Proportion, Series and Progressions, Time, Speed and Distance, Time and Work.	24
2	**Numerical Ability-II** Permutations and Combinations, Probability, Mean, Median, Mode, Standard Deviation, and Variance, Data Interpretation, Graphical Data Interpretation, Pie Charts, Tabular Data Interpretation, Simple Arithmetic Operations, Interest and Compound Interest, Linear equations, Quadratic equations, Triplets, Trigonometry	12
3	**Logical Reasoning** Clocks and Calendar, Direction sense, Family tree, Syllogism, Seating arrangement, Team formation, Coding and Decoding, Number Series and Letter Series, Ranking and Arrangements, Game-Based Aptitude.	12
4	**Verbal Ability & Reading Comprehension** Subject-Verb Agreement, Articles and Other Determiners, Prepositions, Tenses, Parts of Speech, Active and Passive Voice, Direct and Indirect Speech, Conjunctions, Sentence Selection, Contextual Vocabulary, Error Spotting and Sentence Correction, Sentence Completion, Synonyms and Antonyms, Reading Comprehension, Jumble words & sentences.	12
	Total	60

				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge : NIL

Course Objectives: This course aims at enabling students :

1. To introduce the students to the concept of Design Thinking and its relevance in innovation
2. To equip students with the core concepts, frameworks, and techniques of Innovation management and its Applications.
3. To help students to understand design thinking as a creative problem-solving approach

Course Outcomes:

After learning the course, the students will be able to:

1. **Explain** the concept **of** Design Thinking and Opportunity Assessment in Business
2. **Demonstrate** strategic foresight for the business models
3. **Apply** the concept of Innovation Management in for business growth.
4. **Apply** the techniques of Internet Business Design for business growth

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Introduction to Design Thinking:** Meaning of Design Thinking, Design thinking for competitive advantage, The Need for Creative and Design, why design needs entrepreneurial mindset, combining entrepreneurial and design thinking, Opportunity Assessment - "How do we source and identify opportunities?" and "Which opportunities should we invest time and money in?" Three dimensions of Opportunity Assessment - Product-Market fit, Product-Company fit, and Product-Business fit. "Go/No-Go" recommendation to invest and initiate.	7
2	**Business Challenges and Design Thinking Solutions Paradigm Shift:** The seven steps of design thinking, Tools of Design Thinking, First Mover and late mover Advantage, Five Cs of Opportunity Storytelling, Strategic Foresight, Sensing, Value Redefinition, Experience Design, Humanization, Prototyping, Business Model Design	8
3	**Innovation Management:** Concept of Innovation, Characteristics of innovation, Sources of innovation, Types of innovation, Levels of Innovation, Evolution of innovation management, Organizations and Innovation Process, Diffusion of Innovation, Effective innovation management, Performance evaluation, Risk Management in Innovation. Case Studies based on Innovation management	7

4	**Internet Business Design:** Digital/Internet Business Model, Design of Services and Customer Experience. Service sector – IDEO, Lego, E-commerce market players design thinking strategies. Design Thinking and IoT Toward Sustainable Design Thinking. Managing Future Technologies, and minimizing risk of failure.	8
	Total	30

				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge : NIL

Course Objectives: This course aims at enabling students :

1.To help the students gain understanding regarding the concept of projects and Project Management

2. To enable the students to know the key components of project management including time, cost & Risk.

3. Recognize issues in a realistic project scenario to understand design thinking as a creative problem-solving approach

Course Outcomes:

After learning the course, the students will be able to

1. **Explain** different stages of project and their significance.
2. **Demonstrate** the triple constraints concepts in project management.
3. **Apply** appropriate approaches to plan execute and evaluate projects through case studies.
4. **Analyze** to mitigate the risk associated with projects.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Introduction to Project Management :** Concept and Definition of Project, Characteristics of Project, Concept and definition of Project Management, Functions of Project Management, Importance of Project Management, Who is a Project Manager, Roles & Responsibilities of Project Manager. Understanding the Phases in the Lifecycle of Projects and their Significance, Different types of Projects: Industrial, Telecommunication, Research and more, Project Selection Methods : Agile method , Waterfall, Methods, Scrum Model & Kanban Model, Jira Model	7
2	**The Triple Constraint in Project Management :** The concept of the Triple Constraint in Project Management : Scope, Cost and Time, Project Cost Management : Concept, Consideration, Five types of Costs involved in a project, Cost Management process, Project Time Management and methods of Time estimation, Communications Management in Project , Work Breakdown Structure (WBS). Case studies based on Mega Projects of the World**.**	7
3	**Planning and Execution of Project:** Developing a Mission, Vision, Goals of the project. Concept and definition of Project Planning. Importance of Project Planning. Concept of Project Execution, Phases of Project Execution, Project Evaluation; The Review Technique – Planning and Scheduling of Activity, Networks - Concept of PERT/CPM, Assumptions in PERT Modeling – Time-cost, Trade-offs, HRM issues in Project Management & How they can be tackled, Reasons for Failures of Project , Case Study with respect to different Domains	8

4	**Project Monitoring and Risk Management :** Concept of Project Monitoring , How to Building a Suitable Monitoring; Control System, Concept of Conflict Management, Concept & Definition of Risk and Risk Management, Concept of Risk Matrix Analysis, Strategies to Manage Risks, An Overview of Useful Techniques and Tools Used in Project Management. Case Studies with respect to different Domains.	8
	Total	30

				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge : NIL

Course Objectives: This course aims at enabling students :

1. To inculcate an entrepreneurial mindset into the minds of young professionals
2. To enable the students to evaluate challenges relating to new ventures.
3. To provide the students an understanding about different skills for founding, leading & managing startups .

Course Outcomes:

After learning the course, the students will be able to:

1. Explain the concepts and role of entrepreneurship.
2. Identify new venture opportunities in today's Business world.
3. Analyze strategic choices in relation to the growth of new ventures
4. Correlate the Startup opportunities and key factors supporting the Start up Culture in India.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**The Entrepreneurial Perspective :** Why to become entrepreneur ,Characteristics of an Entrepreneur, Functions of an Entrepreneur, Types of Entrepreneurs , Distinction between Entrepreneur and Manager The entrepreneurial decision process, Role of entrepreneur in economic development, future of entrepreneurs, Concept of Business Opportunity, Business Opportunities Identification Process..	7
2	**Creating & Starting Ventures :** Concept of business idea, Sources of new idea generation, Methods of Idea generation, Creative problem solving, Product planning and development, Business Structure, Creating a Business Plan, Market Size Analysis, Legal issues and Regulations to set up a business, Business Patents, Trademarks, Copy rights, Trade secrets, Licensing.	7
3	**Managing and Growing a New Business Venture :** Attractiveness of a new entry opportunity- Entry strategy for new entry exploitation- risk reduction strategies for new entry exploitation, Growth Strategies – economic implications of growth, overcoming pressures on existing financial resources, human resources, management of employees and entrepreneur's time, Sustaining a Business turbulence, Government incentives & Schemes.	8

4	**The Startup Ecosystem in India :** Meaning of Startup, Types of Start-ups, The Rise of The Startup Economy, Startup Policy, Startup opportunities, and Financial support for Start ups. Recent initiatives including Start up India, Make in India, Digital India, and Policies for technology Start-ups,E- commerce Startups, Tech Support and Proto type Development centers. Start up Infrastructures: Co – Working Space, Market development initiatives..	8

Course Objectives:

This course aims at enabling students

1. The inculcate the knowledge of the core concepts of business finance and its importance in managing a business
2. To improve students 'understanding of the time value of money concept and the role of finance in the current competitive business scenario..

Course Outcomes:

After learning the course, the students will be able to :

1. **Explain** the concept of Business Finance and financial planning.
2. **Illustrate** the concept of capitalization in Business Organizations.
3. **Analyze** Financial markets and the role of financial institutions in Business Development.
4. **Evaluate** the role of Financial System in Business.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Business Finance:** Concept of Business Finance, Objective and Scope, Significance of Finance, principles of business finance, Finance Function, Business finance v/s Corporate finance, Source of Finance. Meaning of financial planning, steps in financial planning, significance of financial planning, essential features of a good financial plan, Personal financial planning, Types of financial plan.	7
2	**Capitalization :** Introduction to capitalization, Amount of Capitalization, Over Capitalization, Under Capitalization, Venture Capital - Meaning of Venture Capital, Method of Venture Financing ,Venture Capital Funds, Polices and Procedures adopted by Venture Capitalists, Venture Capital in India, Guidelines for Venture Funds.	7
3	**Financial Markets, Institutions and Instruments:** Introductions to Financial Markets: Nature, Functions and Types of Financial markets, Different Financial Instruments, Sources of financing: Shares, Debentures, Term Loans, Retained Earnings, Public Deposits, Bonds, Trade Credit, Mutual Funds - Definition, Types of Mutual Funds, Significance of Mutual Funds; Case Studies on Financial Markets.	8
4	**Constituents of the Financial System and Regulatory Institutions :** Classification: Fund Based, Non Fund Based and Modern Services, Hire Purchasing, Leasing: Lease Financing - Essential Elements of Leasing, Types of Leases, Merits and Demerits of Lease Financing, Merchant Banking - Role; Functions of Merchant Banking, Factoring. Debt management, Portfolio Management. RBI - Organization, objectives, role and functions, monetary policy of RBI, NABARD, SEBI - Organization and Objectives	8

Program:	B. Tech .I.T.					Semester:	IV	
Course :	Constitution of India					Code:	BSH24VE02	
Credit	Teaching Scheme			Evaluation Scheme				
	Lecture	Practical	Tutorial	FA		TW	SA	Total
				FA1	FA2			
2	2	-	-	20	30	-	-	50

Course Objectives:

1. Provide an overview of the historical context leading to the framing of the Indian Constitution.
2. Study the fundamental rights enshrined in the Constitution and their application.
3. Study the structure and functions of key constitutional institutions like the President, Parliament, and Judiciary.

Course Outcomes:

After learning the course, the students will be able to

1. **Demonstrate** Historical Understanding.
2. **Analyze** Fundamental Rights and Duties
3. **Comprehend** Constitutional Institutions
4. **Evaluate** Constitutional Amendments and Contemporary Issues.

Detailed Syllabus:

Unit	Description	Duration (Hrs)
1	**Fundamentals of Indian Constitution** • Introduction to the Indian Constitution: Historical background, making of the Constitution, and its significance • Preamble: Understanding the importance and interpretation of the Preamble to the Constitution • Fundamental Rights, Directive Principles of State Policy • Analyze the salient features of the Indian Constitution	7
2	**Structure and Functioning of Government** • Union Executive: Study of the President, Vice-President, Prime Minister, and Council of Ministers, along with their powers and functions • Parliament: Understanding the composition, powers, and functioning of the Lok Sabha and Rajya Sabha • Judiciary: Analysis of the structure, independence, and functioning of the Supreme Court and High Courts • Federalism: Examination of the division of powers between the Union and States, along with the role of institutions like Governors and State Legislatures	7
3	**Constitutional Amendments and Legal Framework** • Amendment Process: Understanding the procedure for amending the Constitution and significant amendments • Constitutional Bodies: Study of institutions like the Election Commission, Comptroller and Auditor General, and their constitutional roles • Emergency Provisions: Analysis of the provisions related to national emergency, state emergency, and financial emergency • Constitutional Remedies: Detailed study of writs, judicial review, and other constitutional remedies available to citizens	8

4	**Contemporary Issues and Challenges** • Judicial Activism: Analysis of the role of the judiciary in addressing contemporary issues and ensuring constitutional principles • Constitutional Governance: Examination of challenges to constitutional governance, including federalism, secularism, and social justice • Constitutional Amendments: Critique of recent constitutional amendments and their implications on democracy and governance • Comparative Constitutional Law: Comparison of the Indian Constitution with other constitutions to understand global constitutional trends and best practices	**8**
	Total	**30**

Open Elective Mathematics

Program :	B. Tech. I.T.					Semester: IV	
Course :	Applied Mathematics (Suggested for Mechanical branch)					Code :	BSH24OE01

Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge of

1. Univariate Calculus
2. Multivariate Calculus

is essential.

Course Objectives:

After completion of the course, students will have adequate background, conceptual clarity and knowledge of mathematical principles related to:

1. Statistical techniques and Probability theory for Data Analysis.
2. Partial differential equations applied to mechanical engineering problems such as mechanical vibrations and heat transfer.
3. Laplace Transform and Inverse Laplace Transform applied to solve linear differential equations.

Course Outcomes:

After learning the course, the students should be able to:

1. **Apply** descriptive statistical techniques for measures of variability of numerical data, Curve fitting, Correlation and Regression.
2. **Make predictions** for the numerical data using probability theory and hypothesis testing.
3. **Apply** variable separation method to solve wave, transport, one and two-dimensional heat flow equations.
4. **Solve** the mass spring system and similar problems using Laplace and Inverse Laplace Transform.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Statistics:** Measures of Variability: Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Curve fitting, Correlation and Regression.	**7**
2	**Probability Distributions:** Probability, Theorems on Probability, Mathematical Expectation, Binomial, Poisson, and Normal Distributions. **Hypothesis Test:** z-test, t-test, Chi-Square test, ANOVA Test.	**8**
3	**Applications of Partial Differential Equations:** Solution to One dimensional Wave, Heat and Transport equation, Two-dimensional heat flow equation using Method of separation of variables.	**7**
4	**Laplace Transform:** Introduction, Laplace Transform of some standard and special functions, Region of convergence and Properties, properties and theorems of Laplace Transformation.Inverse Laplace Transform, Application of Laplace Transform to solve LDE.	**8**

1	**Statistics:** Measures of Variability: Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Curve fitting, Correlation and Regression.	7
2	**Probability Distributions:** Probability, Theorems on Probability, Mathematical Expectation, Binomial, Poisson and Normal Distribution **Hypothesis Test:** z-test, t-test, Chi-Square test, ANOVA Test.	8
3	**Numerical Methods:** **Interpolation:** Finite Differences, Newton's and Lagrange's interpolation formula **Numerical Integration:** Trapezoidal and Simpson's rule **Ordinary differential equations:** Euler's, Modified Euler's and Runge-Kutta fourth order methods	7
4	**Vector Differentiation:** Introduction, Vector differential operators, Gradient, Divergent, Curl, Directional Derivatives, Solenoidal and Irrotational fields, Scalar Potential. **Vector Integration and Applications:** Introduction to Line, Surface and Volume Integration of vectors, Work-done, Green's Lemma, Gauss's Divergence theorem, Stoke's theorem, Application to problems in Electro-Magnetic fields.	8
	Total	30

Program :	B. Tech. I.T.	Semester: IV	
Course :	**Computational Techniques** (Suggested for Comp/IT branch)	Code :	BSH24OE07

Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge of

1. Univariate Calculus
2. Multivariate Calculus

is essential.

Course Objectives:

After completion of the course, students will have adequate background, conceptual clarity and knowledge of mathematical principles related to:

1. Statistical techniques, Probability theory, and hypothesis techniques.
2. Different mathematical approaches for optimization.

Course Outcomes:

After learning the course, the students should be able to:

1. **Apply** statistical methods like variability, curve fitting, correlation and regression analysis for prediction of a given data.
2. **Analyze** the data using probability theory and distributions.
3. **Make predictions** for the numerical data using hypothesis testing.
4. **Solve** transportation and assignment problems using optimization techniques..

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Statistics:** Measures of Variability: Standard deviation, Coefficient of variation, Moments, Skewness and Kurtosis, Curve fitting, Correlation and Regression.	**7**
2	**Probability Distributions:** Probability, Theorems on Probability, Random Variable, Probability mass function, Mathematical Expectation, Probability distributions: Binomial, Poisson, and Normal.	**8**
3	**Sampling Distribution:** Introduction and Types, Population vs Sample **Hypothesis Tests:** Level of significance, Confidence interval, p-Test, z-test, t-test, Chi-Square test, ANOVA Test.	**7**
4	**Transportation Problems:** Introduction, Mathematical model of transportation problem, Methods of finding initial solutions: North-west Corner rule, Least cost method, VOGEL‟s approximation method, Optimality of initial solution using MODI Method. **Assignment Problems:** Introduction, Mathematical model of Assignment problem, solutions to Assignment problems using Hungarian method.	**8**
	Total	**30**

Credits	Teaching Scheme (Hrs./Week)			Evaluation Scheme and Marks			
	Lecture	Practical	Tutorial	FA		SA	Total
				FA1	FA2		
2	2	-	-	10	10	30	50

Prior knowledge of

1. Univariate Calculus
2. Multivariate Calculus

Course Objectives:

After completion of the course, students will have adequate background, conceptual clarity and knowledge of mathematical principles related to:

1. Different mathematical approaches for optimization.
2. Commonly used tools and techniques in network analysis.

Course Outcomes:

After learning the course, the students should be able to:

1. **Formulate** and solve linear programming models using graphical, Simplex method.
2. **Solve** transportation and assignment problems using optimization techniques.
3. **Analyze** the project network problems and their solutions using critical path method to optimize models.
4. **Apply** variants of numerical methods to find optimal solutions for constrained, unconstrained problems.

Detailed Syllabus:

Unit	Description	Duration [Hrs]
1	**Linear Programming (LP):** Introduction, formulation of Linear Programming problems, Graphical solution method, multiple optimal solutions, Unbounded solutions, Infeasible solutions, Simplex Method.	**8**
2	**Transportation Problems:** Introduction, Mathematical model of transportation problem, methods of finding initial solutions: North-west Corner rule, Least cost method, VOGEL"s approximation method, Optimality of initial solution using MODI Method. **Assignment Problems:** Introduction, Mathematical model of Assignment problem, solutions to Assignment problems using Hungarian method.	**7**
3	**Network Analysis:** Network Diagram, Project Management: PERT and CPM, Critical path analysis, Project scheduling with uncertain activity time, and Project time-cost	**8**
4	**Unconstrained optimization:** One-dimensional search methods, Gradient-based methods, Conjugate direction and quasi-Newton methods, **Constrained Optimization:** Lagrange theorem	**7**
	Total	**30**

Vision and Mission of Information Technology Department

Department Vision

To become a front-runner in the western region in preparing Information Technology engineers with academic excellence and research skills empowering their roles in technology and society.

Department Mission

1. To equip students with the skills and knowledge through a dynamic learning environment
2. To collaborate with industries to nurture proficient Information Technology Engineers
3. To cultivate a spirit of research, innovation, and entrepreneurship to address community and business challenges.
4. To imbibe work ethics and leadership skills through co-curricular and extracurricular activities.
